1 Summary

An archaeological watching brief was carried out at 17 Elianore Road, Colchester in advance of the construction of an extension to the rear of the property. Despite being located in an area of known Roman cemeteries and close to the pre-Roman settlement at Sheepen (Scheduled Monument 1002173), no significant archaeological horizons were identified.

2 Introduction (Fig 1)

This report presents the results of an archaeological watching brief at 17 Elianore Road, Colchester, Essex which was carried out on 2nd July 2015. The work was commissioned by Chris Morris Design Ltd, on behalf of Mr P Powell, in advance of the construction of an extension to the rear of the property, and was undertaken by Colchester Archaeological Trust (CAT).

In response to consultation with Colchester Borough Council Planning Services (CBCPS), Colchester Borough Council Archaeological Advisor Jess Tipper advised that in order to establish the archaeological implications of this application, the applicant should be required to commission a scheme of archaeological investigation in accordance with paragraphs 128, 129 and 132 of the *National Planning Policy Framework* (DCLG 2012).

All archaeological work was carried out in accordance with a *Brief for Continuous Archaeological Recording*, detailing the required archaeological work, written by Jess Tipper (CBCPS 2015), and a written scheme of investigation (WSI) prepared by CAT in response to the brief and agreed with CBCPS (CAT 2015)

In addition to the brief and WSI, all fieldwork and reporting was done in accordance with English Heritage's *Management of Research Projects in the Historic Environment (MoRPHE)* (English Heritage 2006), and with *Standards for field archaeology in the East of England* (EAA 14 and 24). This report mirrors standards and practices contained in the Institute for Archaeologists' *Standard and guidance for archaeological watching brief* (ClfA 2014a) and *Standard and guidance for the collection, documentation, conservation and research of archaeological materials* (ClfA 2014b).

3 Archaeological background

The following archaeological background draws on the Urban Archaeological Database (UAD) created by Colchester Borough Council, and the Essex Historic Environment Record (EHER).

The site lies in an area of archaeological potential located within the area termed 'the western cemetery' by Hull (1958) or more generally considered the Lexden cemetery (EHER 11713, 11714), an area of Iron Age and Roman burial grounds to either side of Lexden Road. This was the main Roman road leading from the walled town to London. Discoveries in the area include an Iron Age burial (EHER 11806) and a Late Iron Age cremation (EHER 11716).

The proposed development is also outside the western edge of the site of pre-Roman settlement at Hilly Fields and Sheepen (Scheduled Monument 1002173). Earlier evidence for human activity in the vicinity is evidenced by Bronze Age finds (EHER 11805) and a Bronze Age cremation (EHER 11809).

An evaluation (CAT Report 338) and watching brief at Lexden Grange (CAT Report 431), off Lexden Road revealed part of a Late Iron Age pedestal urn (thought to be from a disturbed cremation) and some Roman pits and ditches which included metal-working debris and a fragment of crucible used for brass-making. No significant archaeological horizons were identified during groundworks at 27 Elianore Road (CAT Report 910).

4 Results (Figs 2-3)

The footprint of the new extension was aligned on top of the foundations of a pre-existing five-sided conservatory. Only a short section of foundation trench was dug through new ground to make the extension square.

The trenches were dug by mechanical excavator under archaeological supervision to a width of 600mm and a depth 1m. Three layers were identified. Modern topsoil (L1, c 380mm thick) sealed a layer of subsoil (L2, c 200mm thick), which in turn sealed natural sands and gravels (L3). No significant archaeological horizons were identified.

Photograph 1 Foundation trench, looking S

Photograph 2 Foundation trench, looking SE

5 Finds

No archaeological finds were recorded.

6 Discussion

Despite being located within an area of Roman cemeteries and close to the pre-Roman settlement Sheepen, no significant archaeological horizons were identified.

7 Acknowledgements

CAT thanks Chris Morris Design Ltd and Mr P Powell for commissioning and funding the work. The project was managed by C Lister and carried out by M Baister. Site plans were prepared by C Lister. The project was monitored for the CBCPS by Jess Tipper.

Site Location and Description

The proposed development site is at 17 Elianore Road, Colchester, Essex, CO3 3RX. It lies approximately 1.5 miles west of Colchester town centre on the northern side of Elianore Road. Centred at NGR TL 977 253 (Fig 1).

Proposed work

The development comprises the erection of a single-storey extension to the rear of the property to be a garden room where there is currently a conservatory.

Archaeological Background

The following archaeological background derives from the CBCAA brief with data from the Urban Archaeological Database (UAD) and Essex Historic Environment Records.

The site lies in an area of archaeological potential located within the area termed 'the western cemetery' by Hull (1958) or more generally considered the Lexden cemetery (Essex Historic Environment Record EHER no.s 11713, 11714), an area of Iron Age and Roman burial grounds to either side of Lexden Road. This was the main Roman road leading from the walled town to London. Discoveries in the area include an Iron Age burial (EHER 11806) and a Late Iron Age cremation (EHER 11716).

The proposed development is also outside the western edge of the site of pre-Roman settlement at Hilly Fields and Sheepen (Scheduled Monument 1002173). Earlier evidence for human activity in the vicinity is evidenced by Bronze Age finds (EHER 11805) and a Bronze Age cremation (EHER 11809).

A nearby evaluation (CAT report **338**) and associated archaeological watching brief by CAT at Lexden Grange (CAT Report **431**), off Lexden Road revealed part of a Late Iron Age pedestal urn, thought to be part of a disturbed cremation and some Roman pits and ditches which included metal-working debris and a fragment of crucible used for brass-making.

Planning Background

A planning application was submitted to Colchester Borough Council in October 2014 for the proposed work (above: Planning reference 146254). As the site lies within an area highlighted by the EHER as having a high potential for archaeological deposits, a full archaeological condition was recommended by Colchester Borough Council Archaeological Advisor (CBCAA). The recommended archaeological condition is based on the guidance given in the *National Planning Policy Framework* (DCLG 2012) and states:

" Prior to commencement of development, details of a watching brief to be carried out by a suitably qualified archaeologist (during construction works) shall be submitted to and agreed in writing by the Local Planning Authority. The development shall thereafter be carried out in strict accordance with these agreed details. In the event that any significant archaeological features or remains are discovered which are beyond the scope of the watching brief (and require fuller rescue excavation) the construction work shall cease immediately and shall not recommence until a revised programme of archaeological work including a scheme of investigation has been submitted to, and approved in writing, by the Local Planning Authority. This will record and advance understanding of the significance of heritage assets that might be present at this location before they are damaged or destroyed."

Requirement for Work

The required archaeological work involves undertaking a Continuous Archaeological Recording (Watching Brief) of all the groundworks undertaken by the contractor (including the

removal of foundations of the previous conservatory). The mechanical stripping will involve using a flat-edged ditching bucket whilst under constant archaeological supervision. Details are given in a Project Brief written by CBCAO (Brief for Continuous Archaeological Recording at 17 Elianore Road, Colchester, CO3 3RX - CBC 2015). Once the strip is complete a meeting will be held on site with CBCAA, the developer and CAT to discuss if any further work is needed.

It is anticipated that this work will comprise the complete excavation and recovery of any burials on the site and standard sample excavation of all other features.

Specific research aims are:

- Follow requirements as stated in section 3.1 and 3.2 of the Brief
- To preserve by record any archaeological remains that may be destroyed by the development.
- In particular to look for potential evidence of Iron Age or Roman burials.

General Methodology

All work carried out by CAT will be in accordance with:

- professional standards of the Chartered Institute for Archaeologists, including its *Code of Conduct* (CIfA 2014a-c)
- Standards and Frameworks published by East Anglian Archaeology (Gurney 2003, Medlycott 2011)
- required standards of fieldwork in Colchester Borough (CM 2008a, b)
- relevant Health & Safety guidelines and requirements (CAT 2014)
- the Project Brief issued by CBCAA (CBC 2015)

Professional CAT field archaeologists will undertake all specified archaeological work, for which they will be suitably experienced and qualified.

Notification of the supervisor/project manager's name and the start date for the project will be provided to CBCAA one week before start of work.

Unless it is the responsibility of other site contractors, CAT will study mains service locations and avoid damage to these.

A project or site code will be sought from the curating museum, as appropriate to the project. This code will be used to identify the finds bags and boxes, and the project archive when it is deposited at the curating museum.

Written Scheme of Investigation

Prior to start of work, a Written Scheme of Investigation will be submitted to CBCAA. The WSI will describe in appropriate detail how the *Brief* from CBCAA will be implemented in fieldwork, post-excavation, reporting and publication stages.

The WSI shall be submitted to CBCAA, and fieldwork will not commence prior to approval of WSI from CBCAA.

The WSI will include a location plan of the development site showing area of proposed excavation or trench layout.

OASIS Record

At the start of work (immediately before fieldwork commences) an OASIS online record <http://ads.ahds.ac.uk/project/oasis/> will be initiated and key fields completed on Details, Location and Creators forms.

At the end of the project all parts of the OASIS online form will be completed for submission to CBCAA and EHER. This will include an uploaded .PDF version of the entire report.

Staffing

The number of field staff for this project is estimated as follows – one archaeologist to continually monitor the strip

In charge of day-to-day site work: Ben Holloway.

Watching brief methodology

There will be sufficient on-site attendance by CAT staff to maintain a watch on all contractors' ground reduction, footings work, service trench digging, and all related works to record, excavate or sample (as necessary) any archaeological features or deposits.

All topsoil removal and ground reduction, which will be done with a toothless bucket.

If archaeological features or deposits are uncovered, time will be allowed for these to be planned and recorded.

If any features or deposits uncovered are to be destroyed by the proposed development, time will be allowed for these features to be excavated by hand. This includes a 50% sample of discrete features (pits, etc) and 10% of linear features (ditches, etc).

Fast hand-excavation techniques involving (for instance) picks, forks and mattocks will not be used on complex stratigraphy.

A metal detector will be used to examine the site, spoil heaps, and the finds recovered.

Individual records of excavated contexts, layers, features or deposits will be entered on pro-forma record sheets. Registers will be compiled of finds, small finds and soil samples.

All features and layers or other significant deposits will be planned, and their profiles or sections recorded. The normal scale will be site plans at 1:20 and sections at 1:10, unless circumstances indicate that other scales would be appropriate.

Site surveying

Normal scale for archaeological site plans and sections is 1:20 and 1:10 respectively, unless circumstances indicate that other scales would be more appropriate.

The site grid will be tied into the National Grid. Corners of excavation areas and trenches will be located by NGR coordinates.

Environmental sampling policy

The number and range of samples collected will be adequate to determine the potential of the site, with particular focus on palaeoenvironmental remains including both biological remains (e.g. plants, small vertebrates) and small sized artefacts (e.g. smithing debris), and to provide information for sampling strategies on any future excavation. Samples will be collected for potential micromorphological and other pedological sedimentological analysis. Environmental bulk samples will be 40 litres in size (assuming context is large enough)

Sampling strategies will address questions of:

- the range of preservation types (charred, mineral-replaced, waterlogged), and their quality
- concentrations of macro-remains
- and differences in remains from undated and dated features
- variation between different feature types and areas of site

CAT has an arrangement with Val Fryer (Loddon) whereby any potentially rich environmental layers or features will be appropriately sampled as a matter of course. Val Fryer will do any processing and reporting.

Should any complex, or otherwise outstanding deposits be encountered, VF will be asked onto site to advise. Waterlogged 'organic' features will always be sampled. In all cases, the

advice of VF and/or the English Heritage Regional Advisor in Archaeological Science (East of England) on sampling strategies for complex or waterlogged deposits will be followed, including the taking monolith samples.

Human remains

Policy depends on the age of the burial. If it is clear from their position, context, depth, or other factors that the remains are ancient, then normal procedure is to apply to the Department of Justice for a licence to remove them. In that case, conditions laid down by the license will be followed.

If it seems that the remains are not ancient, then the coroner, the client, and CBCAA will be informed, and any advice and/or instruction from the coroner will be followed.

Allowance will be made in the budget and timetable to allow a human bone specialist to visit site to advise on recording and lifting human remains (inhumations), and for an experienced conservator to visit site and advise on recording and lifting of fragile grave goods.

Photographic record

Will include both general and feature-specific photographs, the latter with scale and north arrow. A photo register giving context number, details, and direction of shot will be prepared on site, and included in site archive.

Post-excavation assessment

If a post-excavation assessment is required by CBCAA, it will be normally be submitted within 2 months of the end of fieldwork, or as quickly as is reasonably practicable and at a time agreed with CBCAA.

Where archaeological results do not warrant a post-excavation assessment, preparation of the normal site report will begin. This is usually a PDF report available as hard copy, and also published on the CAT website and on the OASiS website.

Finds

All significant finds will be retained.

All finds, where appropriate, will be washed and marked with site code and context number.

Stephen Benfield (CAT) normally writes our finds reports. Some categories of finds are automatically referred to other CAT specialists:

animal bones (small groups): Adam Wightman

flints: Adam Wightman

or to outside specialists:

small finds, metalwork, coins, etc: Nina Crummy.

animal bones (large groups) and human remains: Julie Curl (*Sylvanus*)

environmental processing and reporting: Val Fryer (Loddon)

conservation of finds: staff at Colchester Museum

Other specialists whose opinion can be sought on large or complex groups include:

Roman brick/tile: Ernest Black

Roman glass: Hilary Cool

Prehistoric pottery: Paul Sealey

Other: EH Regional Advisor in Archaeological Science (East of England).

All finds of potential treasure will be removed to a safe place, and the coroner informed immediately, in accordance with the rules of the Treasure Act 1996. The definition of treasure is given in pages 3-5 of the Code of Practice of the above act. This refers primarily to gold or silver objects.

Requirements for conservation and storage of finds will be agreed with the appropriate museum prior to the start of work, and confirmed to CBCAA.

End of Fieldwork, and Report

Notification will be given to CBCAA when the fieldwork has been completed.

An appropriate report will be prepared to minimum acceptable standards outlined in *Management of Research Projects in the Historic Environment* (English Heritage 2006).

The draft report will be submitted within 6 months of the end of fieldwork for approval by CBCAA.

Final report will normally be submitted to CBCAA as PDF, but printed copy can be provided on request.

The report will contain:

- The aims and methodology adopted in the course of the archaeological project
- Location plan of site and excavated area in relation to the proposed development. At least two corners of each trench / excavated area will be given 10 figure grid references.
- A section/s drawings showing depth of deposits from present ground level with Ordnance Datum, vertical and horizontal scale.
- Detailed archaeologists results including list of sites resulting from an EHER/UAD search, and historic maps to show changes and development of site, with a suitable conclusion and discussion and results referring to Regional Research Frameworks (Medlycott 2011).
- All specialist reports or assessments
- A concise non-technical summary of the project results.
- As Appendices, the OASIS entry and the WSI.

An EHER summary sheet will also be completed within four weeks and attached as Appendix to the site report, which will be emailed as PDF to CBCAA.

Results will be published, to at least a summary level (i.e. round-up in *Essex Archaeology & History*) in the year following the archaeological field work. An allowance will be made in the project costs for the report to be published in an adequately peer reviewed journal or monograph series

Archive Deposition

A site archive will be prepared to minimum acceptable standards given in CM 2008, ClfA 2014b, and MoRPHE (EH 2006).

The requirements for archive storage shall be agreed with the curating museum.

If the finds are to remain with the landowner, a full copy of the archive will be housed with the curating museum.

The archive will be deposited with the appropriate museum within 3 months of the completion of the final publication report, with a summary of the contents of the archive supplied to CBCAA.

A Drawing Interchange File (.dxf) will be supplied to for integration in the UAD/HER. AutoCAD files will also exported and saved into a format that can be imported into MapInfo.

Monitoring

CBCAA will be responsible for monitoring progress and standards throughout the project, and will be kept regularly informed during fieldwork, post-excavation and publication stages.

Notification of the start of work will be given to CBCAA one week in advance of its commencement.

Any variations in this WSI will be agreed with CBCAA prior to them being carried out.

CBCAA will be notified when the fieldwork is complete.

The involvement of CBCAA shall be acknowledged in any report or publication generated by this project.
